Vireo Audio — Support Tickets (Set B)

To: Priya Raman, Head of Customer Experience
Cc: Arjun Mehta, Neha Kulkarni, Sameer Qureshi
Subject: Support scorecard and replacement-cost signal

Executive summary

H1 2026 replacement rate was **22.1%**, up from **12.3%** in Q4 2025, while CSAT fell from **3.43 to 3.17**. The strongest operational signal is at product-lot level: Pulse 2 lots 2510, 2511 and 2512 show replacement rates of about 34–38%, versus an approximately 11.0% rate for other Pulse 2 lots.

These cohorts contain **2,428 completed tickets**. Using the policy cost of product unit cost + ■340 logistics, their excess replacement activity is approximately **637 replacements / ■11.60 lakh** relative to the other-lot baseline. This is an anomaly-based estimate: ticket data can identify an unusual lot pattern, but cannot prove a physical manufacturing defect or supplier liability.

Business goal

Detect a materially abnormal product lot within about four weeks of its first support tickets, so Operations can investigate containment before replacement burden compounds. Historical replay crossed the monitor threshold on 30 Nov 2025 (2510), 3 Jan 2026 (2511), and 11 Feb 2026 (2512). Separately, the dashboard KPI target is to reduce H1 replacement rate from 22.1% to **15%**; at the H1 run-rate this is about **■3.38 lakh per quarter** in potential avoided replacement cost.

Agent view

The requested raw bottom-10 scorecard is available in the dashboard. I treat it as a **review queue**, not a conclusion about individual performance. Team, channel, issue mix and hardware-triage assignment affect observed CSAT, and Tier 2 Escalations & Warranty is therefore kept separate from Tier 1 comparisons. A queue-adjusted check is included as a review aid, not a causal personnel model.

Suggested next steps

1. Investigate Pulse 2 lots 2510–2512 with Operations/Quality and review remaining inventory and supplier records.
2. Add the lot monitor to a weekly support-operations review with a minimum-ticket threshold.
3. Sample tickets from the hardware-triage queue before committing training budget.
4. Track replacement rate, CSAT and first-response SLA together; do not use raw CSAT alone for compensation or retraining.

Scope: no customer-level profiling and no per-ticket paid LLM workflow were used.
